

Rec-League Swing Scorecard

v0 • MANUAL

Watch the swing video, mark what you see, then hand the hitter 1–3 things to work on.

HITTER

DATE

FILMED / SCORED BY

Film it right first. Two angles if you can — **face-on** (phone ~15 ft to the side, hip height) and **behind** (catcher's view). Whole body + bat in frame, slow-mo ON. If the body and bat aren't clearly visible, don't score it — refilm.

SWING-KILLER & WHAT TO LOOK FOR	ANGLE	SCORE	NOTES
1. Lunging / drifting Head & weight slide toward the pitcher early. More than ~a head's-width of forward drift = problem.	Face-on	☐ OK ☐ Minor ☐ Major	
2. Casting / bat drag Hands push out wide instead of knob-to-the-ball. Cast-first = problem. ("Always late on the fastball.")	Behind	☐ OK ☐ Minor ☐ Major	
3. Pulling off / flying open Front shoulder & head bail toward the dugout early. Shoulder already open at launch = problem.	Face-on	☐ OK ☐ Minor ☐ Major	
4. No load / no separation Starts dead-still and arms the ball. No gather/coil, no hands-back as the foot lands = problem.	Face-on	☐ OK ☐ Minor ☐ Major	
5. Stepping in the bucket Stride foot lands toward the dugout, not the pitcher. Pointing at the dugout = problem.	Behind	☐ OK ☐ Minor ☐ Major	
6. Steep / long bat path Barrel chops steeply down or loops way uphill instead of matching the pitch plane. Steep either way = problem.	Behind	☐ OK ☐ Minor ☐ Major	

Top 1–3 to work on (only the biggest Majors — don't dump all six)

Drills assigned

Refilm by

Coaching reference

The cue to say and a drill or two for each killer. Give one thing at a time.

1. Lunging / drifting · Face-on

“Stay back — let it come to you. Turn, don't lunge.”

Drills: Fence/wall stride-and-hold · tee work with weight held back · one-handed top-hand tee.

2. Casting / bat drag · Behind

“Knob to the ball. Keep your hands inside.”

Drills: Towel/connection-ball pinned under lead armpit · inside-pitch tee · two-tee drill (don't clip the outer tee).

3. Pulling off / flying open · Face-on

“Stay closed, see it deep, hit it back up the middle.”

Drills: Opposite-field tee/soft-toss · contact point set deeper · “show the logo” — chest closed until the hands go.

4. No load / no separation · Face-on

“Get a rhythm, gather, then go. Hips lead, hands follow.”

Drills: Toe-tap / small leg-kick timing · “hands back as foot goes down” reps · hip-turn-first dry swings.

5. Stepping in the bucket · Behind / Face-on

“Stride to the pitcher, not away from it.”

Drills: Stride into a bat laid on the ground · closed-toe stride vs. a wall · slow walk-up swings toward the mound.

6. Steep / long bat path · Behind

“Match the plane. Stay through the zone, not down or up at it.”

Drills: Two-tee path drill (low back, higher front) · high-tee/low-tee mix · bottom-hand-only path reps.

How to use it: score each killer OK / Minor / Major → pick the top 1–3 Majors only → tell the hitter what you saw + the cue + one drill → refilm in 2–3 weeks and re-score. Did it move? That's your proof.
Honest caveat: these are rough, widely-taught fundamentals, not gospel — trust your eyes and catch the big stuff.
